Marking Report Summary

Mathematics Examination Grade 9

June 2026

Introduction

The mathematics examination consists of one question paper with 40 multiple-choice questions that students are given 120 minutes to answer on a separate answer sheet.

Each question includes a prompt, followed by four options, only one of which is the correct answer. Each question focuses on one specific skill within the following four main fields:

Mathematics Fields

- Numbers and Algebra
- Geometry and Measurement
- Data Analysis and Probability

Mathematics Skills

- Mathematical Knowledge
- Using and Applying Mathematics

Summary of Performance

Positive Areas

- Students' acquisition of knowledge and concepts related to numbers and algebra, and their ability to apply and use them to solve various questions.
- Students' acquisition of knowledge and concepts related to geometry and measurement.

Areas for Improvement

- Students' ability to apply and use the concepts and knowledge related to geometry and measurement to solve various questions.
- Students' ability to apply and use the concepts and knowledge related to data analysis and probability, and their ability to understand and apply them in various contexts.

Recommendations

- Training students on questions that measure their skills and knowledge in the fields of geometry and measurement and data analysis and probability, and enhancing their ability to use these skills and this knowledge in life situations.
- Enhancing students' ability to handle questions that require higher-order thinking and problem-solving skills in all three fields of mathematics.
