Marking Report Summary

Mathematical Skills Examination Grade 12

June 2026

Introduction

The mathematical skills examination consists of one question paper with 40 multiple-choice questions that students are given 150 minutes to answer on a separate answer sheet.

Each question includes a prompt, followed by four options, only one of which is the correct answer. Each question focuses on one specific skill within the following four main fields:

Dealing with Data

- Extracting and processing data
- Identifying similar data
- Choosing and working with models

Dealing with Problems

- Finding procedures for solving problems
- Searching for solutions
- Making choices and decisions

Summary of Performance

Positive Areas

- Students' ability to link the data in a certain figure to the same information in another figure or another representation of the same figure.

Areas for Improvement

- The ability to choose the correct data from a set of unnecessary data and use it correctly to reach the answer.
- The ability to choose the appropriate representation, when a given factor or process changes, to create another data model.
- Finding the appropriate way to use data, which may not be obvious to solve the problem, and providing a solution.
- The ability to determine the appropriate way to look for solutions and implement it correctly.
- The ability to make an informed decision by collecting information and applying the provided selection criteria.

Recommendations

- Enhancing students' skills in dealing with data by enabling them to identify and analyse the data related to the problem and choose an appropriate representation, when factors or processes change, in order to create various data models.
- Developing students' ability to deal with problems by training them on selecting the appropriate research methodologies to reach solutions for problems and life situations, and make informed decisions by collecting available information and analysing provided criteria.
