and Assessment

Leadership,
Management and
Governance

Review Summary

- Primary students achieve positive outcomes in most lessons and steadily develop key learning skills, supported by effective and well-organised internal assessment approaches across year levels.
- Students demonstrate positive attitudes and behaviour, and benefit from a variety of extracurricular activities that contribute to their personal development within a caring and secure environment supported by effective wellbeing and safeguarding arrangements.
- The school is supported by committed leadership and governance that respond constructively to challenges and maintain a clear emphasis on ongoing improvement, alongside continued investment in innovation and the development of school facilities.
- To further improve teaching practices, greater consistency in effective classroom delivery is required, with increased emphasis on interactive student centered approaches, better management of learning time, and appropriate challenge for all students, particularly in the Secondary phase.
- To further enhance students' progress, academic support and intervention strategies should be enhanced to effectively address students' individual learning needs, in and out of lessons, especially in Secondary phase and in Arabic.
